EDUCATION

M. S. Ramaiah Institute of Technology <i>Bachelor of Engineering in Electronics and Communication Engineering – CGPA: 7.01</i>	2023 – 2027 Bengaluru, India
CBSE Public School <i>Senior Secondary Education (XII) – 82.3%</i>	2022
B.D.S Public School <i>Secondary Education (X) – 72%</i>	2020

PROJECTS

Heart Rate Variability (HRV) Monitor | *ESP32, Pulse Sensor, C/C++*

- Developed a real-time HRV monitoring system using an ESP32 microcontroller interfaced with a pulse sensor for continuous heart-rate signal acquisition.
- Implemented signal-processing routines to capture and process heart rate variability, enabling downstream health-analysis and IoT applications.
- Designed the system architecture to support live data capture, laying the groundwork for integration with broader physiological-monitoring platforms.

Car Showroom Management System | *SQL, DBMS*

- Designed a DBMS-based system to manage car inventory, customer records, and sales transactions for a showroom environment.
- Implemented full CRUD (Create, Read, Update, Delete) operations using SQL to keep inventory and customer data accurate and up to date.
- Structured relational schemas to model showroom entities, ensuring data integrity across inventory, sales, and customer records.

AI Resume Screening and Candidate Ranking System | *Python, Groq API, Llama 3.3-70B, Pydantic, PyPDF, python-docx*

- Crafted an LLM-powered Applicant Tracking System (ATS) that parsed PDF and DOCX CVs into 10+ structured candidate attributes using schema-guided JSON generation.
- Fashioned an AI matching engine that compared resumes with job descriptions, generated 0–100 compatibility scores, identified missing skills, and reduced manual resume screening effort by approximately 60%.
- Leveraged Pydantic schemas to validate 10+ data points from PDF and DOCX documents, ensuring consistent LLM output across document formats.
- Optimized hiring workflows by implementing batch processing and automated candidate ranking, providing actionable recruitment summaries to expedite talent acquisition.

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript, HTML, CSS

Core Subjects: Operating Systems, Computer Networks, DBMS

Libraries/APIs: Groq API, Pydantic, PyPDF, python-docx

Technologies: MERN Stack (learning), LPC2147 (ARM7), ESP32

Tools: Microsoft Excel, 8086 Simulator, APIs

CERTIFICATIONS AND ACTIVITIES

- IISc Workshop on PCB Design using Eagle
- The Bits and Bytes of Computer Networking (Google) – Coursera
- Worked as IEEE Execom in 3rd and 4th semester and hosted multiple events and Technical Event.
